Objective

Passionate about **Computer Vision, Artificial Intelligence, and Machine Learning**, with a strong interest in building intelligent systems and exploring the potential of emerging technologies such as **Agentic AI tools**. Enthusiastic about applying AI-driven solutions to solve real-world problems and continuously expanding knowledge in advanced deep learning techniques.

Education

Osmania University –

Bachelor of Technology (B.Tech) in Computer Science Engineering

GPA: 8.32/10.0

International Indian Public School Riyadh, KSA

Intermediate (Class XII)

Percentage: 88.8% | Graduated: 2022

Technical Skills

Languages: Python, Java, Flutter, HTML, CSS, SQL

Frameworks/Technologies: Flask, Selenium, TensorFlow, OpenCV, YOLOv11, Arduino, REST APIs, Numpy, Pandas, PyTorch, Scikit-Learn, K-Means
Hugging Face, Model Context Protocol (MCP), Agentic AI

Concepts: Computer Vision, Data Analytics, Reinforcement Learning, Machine Learning, Deep Learning, Neural Networks, Full-Stack Web Development

Generative AI Expertise: Hugging Face model integration, Retrieval-Augmented Generation (RAG), LoRA fine-tuning, PPO-style RLHF, Stable Diffusion, Gemini API vision integration, ControlNet for image transformation

Professional Experience •

Senior Backend Developer – Market Now

Freelance Software Developer

Senior Backend Developer at Rubat AI

Internship-Intern at Codetech IT Solution as a Data Analyst •

Awards & Achievements

- **Winner – Smart India Hackathon 2024 (1 lakh rupees)**
 - Won Best Innovative Idea at NSAKCET's HackEnvision 2.0
 - Won a Job Offer at Innovator's Fest 24
 - Won Best Project of II Year at Innovatia Panoply
 - 3rd Place – CSI-MJCET Project Expo
 - 3rd Place – HackRev
 - Finalist – HackCelerate
-

Projects

Smart Classroom Assist

- Developed an AI-based classroom system with **YOLOv11 + MediaPipe** for real-time attendance automation and engagement monitoring.
- Implemented **CCTV-triggered note digitization** using OCR + Gemini API, enabling teachers to share clean, structured PDFs.
- Created **AI-powered explainer videos** (Manim + ElevenLabs) and an integrated **chatbot** for personalized doubt-solving.
- Built a **Flutter mobile app** with teacher/student dashboards featuring live analytics, approved notes, and interactive learning support.

Cafe Analyser

- Developed an advanced AI solution to evaluate staff efficiency and customer behavior patterns in cafes using real-time Computer Vision.
- Utilized YOLOv11 for accurate real-time detection of staff positions, customer seating, and queue dynamics.
- Implemented K-Means clustering on spatial and temporal data derived from YOLOv11 to analyze operational efficiencies, such as staff idle time and customer interaction duration.
- Integrated the model via a Flask backend and REST APIs to process live camera feeds and output analytical data to a web dashboard.
- Key Metrics Tracked: Staff service time, peak hour congestion, average waiting time, and high-traffic zone analysis.
- Impact: Provided actionable insights that allowed cafe management to optimize staff scheduling by 15% during peak hours and improve overall service flow.

PostOffice Analyser (Winner – Smart India Hackathon 2024)

- Developed a real-time AI-driven queue management system to optimize post office counter operations.
- Used **YOLOv11** for real-time detection of customers and queues, combined with **K-Means clustering** to analyze crowd flow and staff allocation efficiency.
- Integrated **CCTV RTSP feeds** for live monitoring without requiring new hardware, ensuring a cost-effective solution.
- Designed a Django backend for data processing and a **Flutter mobile app** for real-time visualization of queue length, waiting times, and counter performance.
- Implemented push notifications (**via Firebase**) to alert postmasters when queues exceeded thresholds.
- Enhanced usability with an AI-powered chatbot (**Gemini API**) for conversational queries and instant insights.
- Impact: Reduced customer waiting times, improved staff allocation during peak hours, provided real-time operational insights, and increased efficiency across post office services.

Weaver AI – AI-Powered Website Generation & Deployment Platform

- Developed a full-stack AI-powered platform that generates complete websites from natural language text and voice prompts.
- Built the frontend using HTML, CSS, and JavaScript, with a Python backend to orchestrate code generation, project management, and deployment workflows.
- Integrated Gemini API and cloud-based AI services to automatically generate frontend, backend, database, and API integration code based on user requirements.

- Implemented a voice-enabled AI assistant accessible through both phone calls and an in-browser calling interface, enabling conversational website creation.
 - Automated end-to-end website deployment through Vercel, allowing users to receive live website URLs without manual setup.
 - Enabled seamless API key integration and configuration management for connecting third-party services and AI models.
 - Impact: Reduced website development time from days to minutes, streamlined deployment processes, and enabled users to create production-ready web applications without coding expertise.
-
